

## Appendix D. Roadway Project List – CAMPO and DCHC MPO (December 4, 2018 version)

Each row in the table is a separate highway project. Projects are color-coded by MPO (green for DCHC MPO and yellow for CAMPO) and separated by time period. The three time periods, 2025, 2035 and 2045, are used in the financial plan. The attribute information for each project is presented by columns, and includes:

- MTP ID – This unique number facilitates the tracking and mapping of projects in the plan.
- Highway Project – The highway project is the name of the road.
- From/To – This usually identifies the name of the two road intersections between which the project is to be constructed.
- Existing Lanes – This identifies the number of current travel lanes. “-” indicates an interchange or a new road alignment – in other words, there is no existing road.
- Proposed Lanes – This identifies the number of travel lanes proposed in the plan; if the number of lanes does not increase from the existing lanes, the project does not propose to add through lanes but instead will make safety, intersection, multimodal s or other improvements.
- Improvement Type –
  - Widening is the addition of travel lanes.
  - Modernization can include safety, intersection (e.g., turn lanes), multimodal or other improvements, but does not include the addition of travel lanes.
  - Upgrade refers to capacity and safety improvements to interchanges.
  - New Location is a new roadway.
  - New is the conversion of an intersection to an interchange.
  - Freeway is the conversion of an existing road to a limited access highway (which is a roadway type often referred to as interstate).
  - Expressway is the conversion of an existing road to a highway that is mostly limited access.
- Length – The centerline mileage of the project.
- Estimated Cost – The total costs are costs to be incurred from 2018 through 2045. Cost estimates come from feasibility studies, current and past Transportation Improvement Programs (TIP), NCDOT’s SPOT prioritization process, and the NCDOT Contract Standards and Development Unit project cost workbook.
- STI – The project’s STI (Strategic Transportation Investment) funding tier: statewide, regional or division.
- Regionally Significant – Regionally Significant projects provide access to and from the region, or to major destinations in the region. The FHWA functional classifications serve a different purpose than the local functional classification used by the MPOs, so the two classification systems are significantly different. Generally, the regionally significant designation includes interstate highways, U.S. highways, freeways, and North Carolina signed roads that are the primary road in a corridor. Rail transit facilities, which are described in a separate section, are considered regionally significant. The Regionally Significant designation is important for the Air Quality Conformity Determination for the MTP. Under AQ Conformity, if a Regionally Significant project is changed (e.g., completion year, capacity) after the 2045 MTP has been adopted, then the Conformity Determination process might have to be redone.
- Exempt – whether the project is exempt under air quality conformity requirements. If so, the section under which it is exempt is listed.
- TIP# -- The project reference number for those projects which are contained in the 2018-27 Transportation Improvement Program (TIP).
